Cover Letter

Hello,

Nine-plus years in, I have built at every layer of the stack and can take ownership of any of them. Most recently I was the sole frontend engineer among fifteen, building the React and TypeScript dashboard Viasat uses internally to consolidate security findings for 4,000+ users.

That is the visible half. In 2025 I was tech lead on an ERP AI product with a team of five. I built the Node.js and Express backend, its Model Context Protocol (MCP) integration, and the React client, along with the RAG and fine-tuning work behind the AI features. Before that: full-stack fintech features for 10,000 users at Crediverso, Angular dashboards and secure Laravel APIs for 3,000+ legal professionals at Captira, and a pre-hospital logging app that 180+ firefighters and paramedics used across 18 stations in Tijuana. PostgreSQL, AWS, and CI/CD come with it. Whether the scope is a whole product or a single service, I lead the part I am responsible for and see it to production.

On my own time I ship games. Shroom Merge is live on the App Store and Google Play, and Cardom on Google Play. Nobody assigns me those; they are how I stay close to the full arc of a product, from concept through store review. I am looking for a team that expects a senior software engineer to have opinions about the product and not just the ticket, and I would be glad to walk you through any of this.
