## Profile

---

Senior Software Engineer with 9+ years building production backend services and REST APIs in Node.js and TypeScript, across enterprise security platforms, fintech, and agentic AI products, with hands-on semantic data modeling and LLM application experience.

## Experience

---

**Software Engineer**, JointechAI – Tijuana, Mexico Aug 2022 – present

- **Viasat Internal Security Application (via Borderux)**: Designed the semantic data model behind the platform: products, the findings raised against them, and the assets that discover those findings. Built the centralized React and TypeScript dashboard aggregating them for 4,000+ internal users. Sole frontend engineer embedded in a backend-heavy team of 15.
- **Agentic HR ERP (Jointech AI)**: Tech Lead for a team of 5 engineers on the internal HR platform managing 30 employees and analyzing prospective roles and candidates for hiring. Built its Node.js and Express backend: REST APIs, Model Context Protocol integration, RAG retrieval pipeline and fine-tuning workflows, plus the React client.

**Software Engineer**, Arte Digital – Tijuana, Mexico Jan 2020 – Aug 2022

- **Captira**: Engineered full-stack legal software, building complex Angular data dashboards backed by secure Laravel REST APIs serving 3,000+ legal professionals.
- **Crediverso**: Architected and built full-stack fintech features for a platform serving 10,000 users, using React and a headless WordPress backend. Reduced deployment time by establishing CI/CD pipelines with Codeship.

**Web Designer & Developer**, LuballSoftware (Freelance) – Tijuana, Mexico Mar 2016 – Jan 2020

- Developed and managed FireApp, a digital logging application for the Tijuana Fire Department used by 180+ field firefighters and paramedics across 18 stations for pre-hospital incident reports.
- Delivered 25+ web solutions for local businesses over 4 years, ranging from custom e-commerce platforms to landing pages.

## Education

---

**Universidad Tecnológica de Tijuana**, BS in Tecnologías de la Información – Tijuana, Mexico May 2015

## Skills

---

**Backend & APIs**: Node.js, Express, TypeScript, REST API design, PostgreSQL, Firebase, Laravel (PHP)

**Semantic & Data Modeling**: Ontologies (OWL), semantic data models, taxonomies

**AI & LLM**: RAG pipelines, agent orchestration, Model Context Protocol, fine-tuning, prompt engineering

**Cloud & DevOps**: Amazon Web Services, Docker, CI/CD (GitHub Actions), software architecture

**Frontend**: React, TypeScript, Angular, SCSS

## Languages

---

**English**: Professional proficiency

**Spanish**: Native

## Side projects

---

**Shroom Merge** ([Play Store](#), [App Store](#)) July 2026

- Independently developed and released Shroom Merge (Kinoko Merge on iOS), a mobile merge game, taking the project from concept to Play Store and App Store launch.
